纳米云自然加湿技术可将看不见的水分子均匀分配到您的房间内。在干燥条件下初次使用，加湿器产生的水分子会被墙壁、家具和房间内的其他物品吸收。外部干燥空气的过度流通也会增加达到目标湿度所需的时间。
要优化加湿和净化性能，建议在使用过程中关闭门窗。

NanoCloud technology evenly distributes invisible water vapour into your room. In dry conditions moisture from the humidifier will be absorbed by walls, furniture, and other items in your room. Ventilation of dry outside air will also increase the time it takes to reach the target humidity. To optimize humidification and purification performance, it's recommended to close doors and windows during use.
